Basic Flow of the App

User Visits the App

- User lands on the **Landing Page**
- Sees headline and short description
- Can:
    - Login
    - Register

Authentication

If not logged in:

- User registers or logs in
- System validates credentials
- On success → redirect to Dashboard

If already logged in:

- User goes directly to Dashboard

Search / Describe Event (Core AI Feature)

On the Dashboard:

1. User types a natural language description
2. User clicks **Generate Ideas**
3. Backend:
    - Sends input to Azure OpenAI to generate embedding
    - Sends embedding to Azure AI Search
    - Performs vector similarity search
    - Retrieves ranked event templates
4. System returns ranked event plans

View Ranked Results

User sees a list of event cards:

Each card includes:

- Event title
- Short description
- Budget level
- Group size
- Tags

User can:

- Click **View Details**
- Click **Save to Favorites**
- Modify search and try again

View Event Plan Details

When user clicks “View Details”:

System displays:

- Theme description
- Food ideas
- Activity suggestions
- Decoration ideas
- Budget level

User can:

- Save event
- Expand event plan

Favorites

User can:

- View saved events
- Reopen details
- Remove saved plans

Admin Flow (Separate Role)

Admin can:

- Create event templates
- Edit templates
- Delete templates

When creating a template:

- System generates embedding
- Embedding stored in Azure AI Search
- Canonical data stored in Azure SQL

Expand Event Plan (AI Generation)

When user clicks **Expand Plan**:

1. System sends event data to Azure OpenAI
2. AI generates:
    - Event schedule
    - Shopping checklist
    - Setup suggestions
3. Generated content is displayed below event details

User can:

- Copy the plan
- Use it for their real event
